

Imagine ...

Using 3-D imaging technology to locate tumors with pinpoint accuracy, TomoTherapy can deliver stronger doses of radiation while avoiding surrounding organs and tissue.

What is your cancer risk?

Some breast, ovarian, and colon cancers occur because of genetic factors passed from one generation to the next. If two or more members of your extended family have had cancer of any kind, please call about our Family Risk Evaluation Program at **215.710.4511**.

technology powerful enough to beat cancer,
yet *precise enough to protect tissue.*

The most state-of-the-art radiation therapy, available at only 150 cancer centers nationwide, is here today at St. Mary Regional Cancer Center. Breakthrough HI-ART TomoTherapy targets tumors with powerful radiation while avoiding healthy tissue. 3-D imaging technology pinpoints the tumor's exact location before each treatment. Guided by these images, radiation beams are delivered with unparalleled precision. Customized radiation penetrates the tumor, fighting cancer with stronger, more accurate doses than ever before, yet protecting organs often only millimeters away.

St. Mary experts provide comprehensive cancer services, solving the most complex cases using advanced technology and treatments never before imagined. And behind every cutting-edge service we provide, you'll find our compassionate care. A far cry from the routine — but exactly what you'd expect from St. Mary.
